# DeskCenter Inventory & Asset Management

The Basics

The basis for effective IT Management tools is the need for a complete and logical tool to manage the whole IT structure across an organisation.

With DeskCenter's Inventory & Asset Management module you find a tool that handles all daily tasks of the IT department finally united in one single program.

With our unique Agent-Less discovery we reach near 100% discovery rates, giving exceptional Hardware and Software results .

From now on you are able to automate all standard processes that typically take your focus away from delivering a service to your customers. You will have more time for important tasks that add real value. The basis for this is the inventory of the complete software and hardware assets across the network.

All other DeskCenter Management Suite modules leverage the inventory data fully.

Inventory Management

Inventory & Asset Management is the basis of the DeskCenter Management Suite and unites all basic functions for effective IT Lifecycle Management.

- **Software & Hardware Inventory**

- **Active Directory Integration**

- **IT Asset Management**

- **User Administration**

- **Energy Management**

- **Reporting**

With DeskCenter's Inventory & Asset Management module you have a solid working platform for all IT processes and requirements that are necessary for efficient system management.

The solution grows with your needs and is easily expandable by all other modules of DeskCenter Management Suite, including:

- Software Asset Management
- Real-time systems management
- OS Deployment
- Software Deployment
- Patch Management
- Service Desk

DeskCenter®
Management Suite

Finally united.

Simplified IT Management, in a Complex World

Inventory

With DeskCenter Inventory you can capture more than 3.500 items of system detail and discover all software that is installed on a computer. Deskcenter offers five different inventory methods, the majority being agent-less, minimising the impact on your systems and networks.

IT Asset Management

The management of assets after the inventory gives you the possibility to register and evaluate all components and commercial data. Comprehensive allocation to users, cost centres, departments and locations gives you a perfect cost transparency and asset traceability.
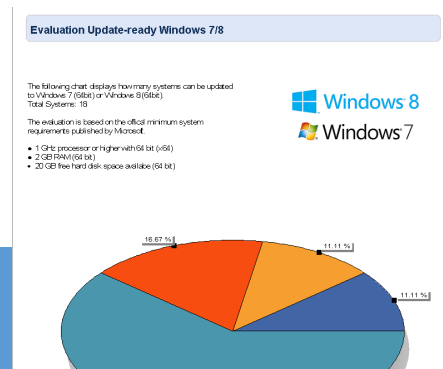

User Administration

DeskCenter user management gives you a very good overview of your employee structure. You can assign passwords or reset them, find users by location or function and you can attach employees with associated assets.

Reporting

With DeskCenter's integrated reporting solution you can generate a range of reports from system details right through cost centre reports. From a base set of more than 80 reports and the ability to create or modify existing reports you will have access to all the information you need.

Key Features

- Agent-Less Inventory
- Comprehensive inventory of each computer system
- Complete integration of all departments and processes
- Full user integration through connection with assets
- Direct access to all important documents
- Perfect reporting using individual, automatic and periodic reports
- Reduces the effort of manual inventory management
- Auto shutdown / start-up of systems to manage

Evaluation Update-ready Windows 7/8

The following chart displays how many systems can be updated to Windows 7 (64bit) or Windows 8 (64bit).
Total Systems: 18

The evaluation is based on the offical minimum system requirements published by Microsoft.

- 1 GHz processor or higher with 64 bit (x64)
- 2 GB RAM (64 bit)
- 20 GB free hard disk space available (64 bit)

Windows 8
Windows 7

16.67 %   11.11 %   11.11 %

Opportunity

Are you planning a Hardware upgrade, Migration to a new Operating System version or looking to deploy a new software solution?

DeskCenter's Inventory & Asset Management module can provide you with all the information you need to assess the environment for suitability, allowing you to make informed decisions.
